DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8 and 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Bartels (4,716,858). See **86**, fig. 4 and col. 6, lines 25-64. Bartels shows in col. 6, line 45 that a firing rate control mode means **55** provides a low fire hold operation at the outset of the operation of the device. This low fire hold will be maintained for a fixed time period, unless the pressure increases or decreases above or below P_{Hi} or P_{Lo} . P_{Hi} or P_{Lo} is considered the predefined conditions meeting the limitations of the claims and the predefined condition related to a system temperature is indicated at **49**.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim(s) 11-14 and 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bartels in view of Pouchak (6,536,678). Bartels discloses all of the limitations of the claim(s) except for the boiler system comprising multiple stages. Pouchak discloses the presence of a boiler system comprising multiple stages. See fig. 6. Hence, one skilled in the art would find it

obvious to modify the system of Bartels to include the boiler system comprising multiple stages of Pouchak for the purpose of energy conservation.

Claim(s) 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bartels in view of Pouchak. Bartels discloses all of the limitations of the claim(s) except for positioning a bypass valve for avoiding condensation. Pouchak discloses the presence of positioning a bypass valve for avoiding condensation. See claim 6. Hence, one skilled in the art would find it obvious to modify the system of Bartels to include the positioning a bypass valve for avoiding condensation of Pouchak for the purpose of heat exchanger protection.

Allowable Subject Matter

Claims 1-7 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The provided references are representative of the state of the art that is applicable to the applicant's invention. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derek S. Boles at (571) 272-4872 or supervisory patent examiner Steve McAllister at (571) 272-6785.
